What are Add-ons?

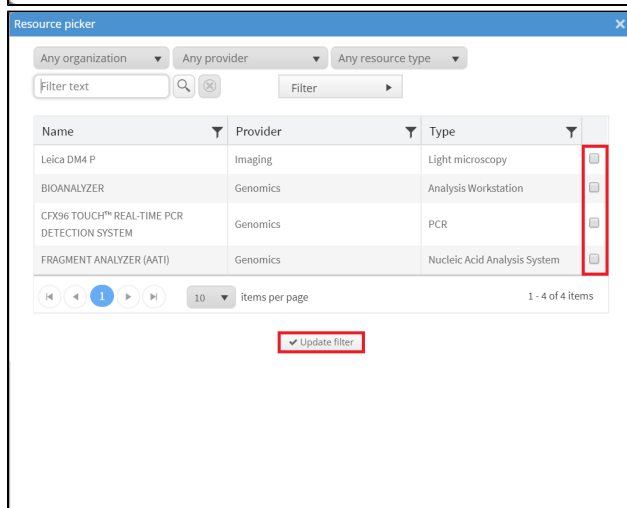

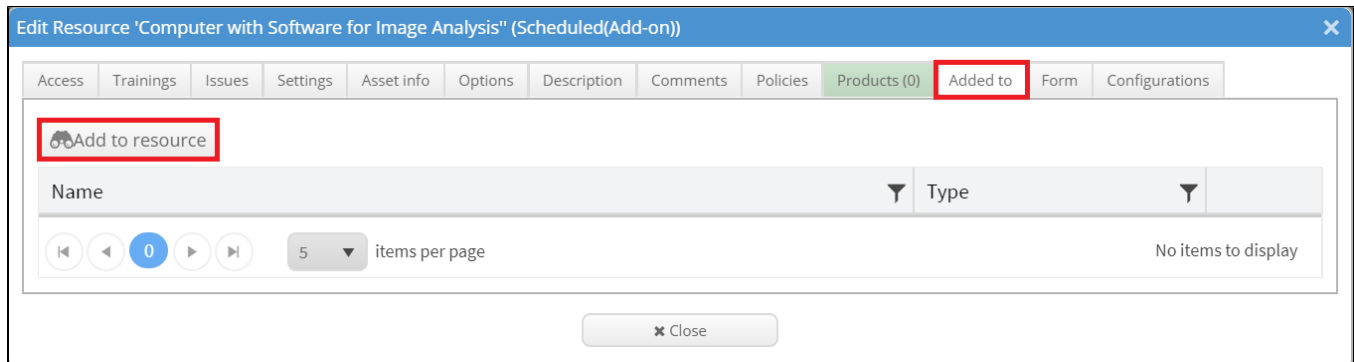

Add-ons can be booked additionally to resources. It is possible that one Add-on can be booked to multiple resources but once it is booked it is not available for the other ones anymore. For example add-ons can be microscope objectives, projectors for a room, etc.

Create Add-ons

Add-ons are created the same way as any new resource. [The process of how a new resource is created can be found here](#). But while creating a new resource you need to choose "**Scheduled (Add-on)**" as "**Resource Class**". After creating an Add-on it needs to be assigned to a resource. This can happen in two ways:

1) Choosing a resource for an Add-on

Open the [resource settings](#) of the Add-on and select the tab "**Added to**". When you click on "**Add to resource**" all possible resources will be listed. You can select them by ticking the boxes on the right side and then click "**Update filter**" to add them.

2) Add the Add-on to a resource

Open the [resource settings](#) of the resource to you want to add your Add-on to and select the tab "**Add-ons**". Click on "**Add Add-on**" and select the Add-ons by ticking the boxes. Then click "**Apply selection**" to add them.

Edit Resource 'Leica DM4 P' (Scheduled)

Booking resources with Add-ons

A resource with Add-ons can be [booked like any other resource](#). The tab "**Add-on**" appears if there are Add-ons available to the resource. In braces the number of available Add-ons is shown. When you click on the tab you can book all wanted Add-ons by clicking on the buttons. The button "**Add-ons**" in the timeline of a resource shows the booking timeline for the resource and all its Add-ons.
