

# Computational light scattering (PAP315)

## Lecture 3b

Antti Penttilä

Department of Physics, University of Helsinki, Finland

- Linux/Mac or Linux subsystem in Windows or MSys2 in Windows
  - If not available, we can give access for this course's time to virtual Linux machine
- GCC compiler suite. In CentOS:
  - `yum install gcc gcc-c++ gcc-gfortan`
  - `yum install fftw fftw-devel`
- ...although you can also find pre-compiled binaries for Windows for both the codes. Use those if you must

- Go to <https://github.com/adda-team/adda>
- Get adda package by downloading the zip...
  - wget https://github.com/adda-team/adda/archive/master.zip
  - unzip master.zip
  - cd adda-master
- ...or by git:
  - mkdir adda; cd adda; git init
  - git clone https://github.com/adda-team/adda.git
- cd src
- make seq
  - If error with FFTW3-library or header file, edit 'Makefile' by uncommenting line 99: 'override OPTIONS += FFT\_TEMPERTON'
- mkdir ~/bin; cp seq/adda ~/bin

## Test ADDA installation

- cd ..tests
- adda -V
- adda
- If command 'adda' is not found, then
  - export PATH=\${PATH}:~/bin

All run parameters are given by command line options. There is a summary of these in the appendix of the ADDA user guide

```
cp ..../input/avg_params.dat .  
cp ..../input/alldir_params.dat .
```

### Scattering from a cylinder

- adda -dir cylinder -shape cylinder  
0.2 -size 20.0 -m 1.5 0.001 -  
save\_geom cylinder.geo
- -store\_int\_field
- -size 20.0 -beam barton5 12.5
- -orient avg avg\_params.dat

### Computing scattering from a sphere

- adda -dir sphere -Csca -shape  
sphere -size 10.0 -m 1.5 0.001 -  
save\_geom sphere.geo

- Go to  
<http://ddscat.wikidot.com/>
- Download source (or, wget  
<http://ddscat.wikidot.com/local->  
-  
[files/downloads/ddscat7.3.3\\_220120.tgz](http://ddscat.wikidot.com/local-))
- tar xzf ddscat7.3.3\_220120.tgz
- cd src; make ddscat; cp ddscat ~/bin

- See the UserGuide.pdf in the doc-folder
- In ddscat root folder, make directory ‘tests’, switch there and copy the default parameter file ‘ddscat.par’ from doc-folder
- Make parameter file for refractive index
- Edit ‘ddscat.par’ and run

- Sphere, compare to ADDA:  
Lines...

```
11: 'ELLIPSOID'  
12: 24 24 24  
27: 6.28319 6.28319 1 'LIN'  
31: 5.0 5.0 1 'LIN'
```

- Two spheres, make geometry file and...

```
11: 'SPHERES_N'  
12: 64 0 'spheres.dat'  
27: 6.28319 6.28319 1 'LIN'  
31: 5.0 5.0 1 'LIN'
```
