We started with Chapter 1 and supplemented it with the theory of Clopper-Pearson confidence interval from pp. 603-605 of Agresti's (2013) book Categorical Data Analysis, 3rd ed. We continued with Sections 2.1-2.5 excluding Figure 2.1 and Subsections 2.4.6 and 2.5.5. Sections 2.6.1.-2.6.3 and 2.7 were covered but Figure 2.4 was skipped. Next we jumped to Section 8.1, and then back to Chapter 3. In it we ignored the material on probit models, count data and Poisson regression or Sections 3.2.5 and Section 3.3 (with the exception of learning about the crab data and peeking at the associated Figures 3.4 and 3.5). We covered most of Chapter 4. The excluded sections were 4.1.5-4.1.6 and 4.3.4-4.3.5. From Chapter 5 we covered sections upto and including 5.1.7.
