Spring 2015

## Exercises 7

Read chapters 2.5–2.7 on predicate logic formulas and validity.

1. Which of the assignments below satisfy the formula  $P_0(x) \leftrightarrow R(x, y)$  in the model in figure 1? Justify your answer.

	$x$	$y$	$z$
$s_0$	1	2	6
$s_1$	3	4	6
$s_2$	5	6	7

FIGURE 1. A model

2. Which of the following assignments satisfy the formula  $xEy$  in the graph in figure 2? Which satisfy the formula  $\exists y xEy$ ? Justify.

	$x$	$y$	$z$
$s_0$	1	2	3
$s_1$	4	5	6
$s_2$	3	8	7

FIGURE 2. A graph

3. Give a  $\{E\}$ -formula that expresses that each vertex in a graph has at least two different neighbours. Two vertices in a graph are neighbours if there is an edge between them.

4. Show that the formulas  $\neg\forall xA$  and  $\exists x\neg A$  are logically equivalent.

5. Show that the formula  $\forall y\exists xA$  is a logical consequence of the formula  $\exists x\forall yA$ .

6. Show that the formulas  $\exists x\forall yR(x, y)$  and  $\forall y\exists xR(x, y)$  are not logically equivalent.
